Sequences of the invention are useful in the diagnosis, treatment and prevention of cancers (e.g., cancers of the adrenal gland, bone, urogenital or bone marrow, in particular breast and ovarian cancer), immune disorders (e.g., autoimmune haemolytic anaemia, rheumatoid arthritis, allergies, Addison's disease, ulcerative colitis), cardiovascular disorders (e.g., myocardial ischaemias), wound healing, neurological diseases (e.g., crebral anoxia, epilepsy) and infectious diseases such as viral, bacterial, fungal and sequence is human TR21 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           forensic; nutritional source; damaged tissue; diseased tissue; myeloid cell disorder; lymphoid cell disorder; none cartilage tissue growth; tendon tissue growth; ligament tissue growth; nerve tissue growth; regeneration; wound healing; tissue replacement; burn; incision; ulcer; cancer; human.

The invention relates to an isolated polymucleotide encoding a polypeptide with biological activity. The polymucleotides and polypeptides are useful in diagnostics, forenaics, gene mapping, identification of mutations responsible for genetic disorders and other traits, to assess biodiversity, as nutritional sources or supplements. The polymucleotides may also be used as molecular weight markers, craise anti-DNA antibodies or elicit immune response. The polypeptides are useful for raising antibodies, as markers for tissues in which the corresponding polypeptide is expressed, for re-engineering damaged or diseased tissues, for treating myeloid or lymphoid cell disorders, in bone cartilage, tendon, ligament and/or nerve tissue growth or regeneration, in wound healing, in tissue repair and replacement, in the sources of a corresponding received the antiple of burns and ulcers, and in treating cancer. The corresponding received the antiple of the antiple of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to novel human secretory proteins or membrane proteins, and their coding sequences. The present sequence is one such protein sequence. The coding sequences of the invention are useful for examination and diagnosis of abnormality of the human secretary proteins and in gene therapy methods. The coding sequences and proteins are useful as candidates for medicines or as target molecules for developing medicines. Antibodies against the proteins of the invention are useful for treating diseases that are associated with the proteins. Note: The sequence data for this patent did not form part of the printed specification, but was obtained from sequence information supplied by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 MAPRALPGSAVLAAAVFVGGAVSSPLVAPDNGSSRALHSRTETTPSPSNDTGNGHPEYIA 60

These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensizes, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention

The invention relates to an isolated polynucleotide encoding a polypeptide with biological activity. The polynucleotides and polypeptides are useful in diagnostics, forenaics, gene mapping, identification of mutations responsible for genetic disorders and other traits, to assess biodiversity, as nutritional sources or supplements. The polynucleotides may also be used as molecular weight markers, chromosome markers or map related gene positions, or as an antigen to raise anti-DNA antibodies or elicit immune response. The polypeptides are useful for raising antibodies, as markers for tissues in which the corresponding polypeptide is expressed, for re-engineering damaged or diseased tissues, for treating mythoid or lymphoid cell disorders, in bone cartilage, tendon, ligament and/or nerve tissue growth or regeneration, in wound healing in tissue repair and replacement, in healing of burns, incisions and ulcers, and in treating cancer. The present sequence represents the amino acid sequence of a novel human

The invention relates to nucleic acid sequences (AAV84411 to AAV84633) encoding human secreted proteins (AAW88534 to AAW88756). The secreted protein gene sequences are deposited with the ATCC under deposit numbers ATCC 97979, 97974, 97975, 97977, 209007, 209008, 209009, 209010, 209011, 209080, 209011, 209082, 209011, 209084, 209085, 209011, Host cells comprising recombinant vectors containing the nucleic acid sequences are used for the recombinant production of the secreted proteins. The polynucleotide and amino acid sequences are useful for are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated human genes and the secreted polypeptides they encor
useful for diagnosis and treatment of e.g. cancers, neurological
disorders, immune diseases, inflammation or blood disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 11; Page 511; 772pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 1999-059865/05.

useful for preventing, treating or ameliorating medical conditions e.g.

by protein or gene therapy. Pathological conditions can be also diagnosed
by determining the amount of the new polymeptides in a sample or by
determining the presence of mutations in the new polymucleotides.

Specific uses are described for each of the polymucleotides, based on
which tissues they are most highly expressed in, and include developing
to the disponse or treatment of cancer, neurodegenerative
disporders for the disponse or treatment of cancer, neurodegenerative
disporders, tumours, leukemias, diseases of the immune system, autoimmune
diseases, hepatic and renal disease of the immune system, autoimmune
diseases, hepatic and renal disease, lymphomas, inflammation, allergies,
ischemic shock, Alzheimer's and cognitive disorders involving osteoclasts
such as osteoporosis, arthritis or malignancies, diseases of testes, lung
to thymus, digestive/endocrine disorders, infections and AIDS. The
polypeptides are also useful for identifying their binding partners. The
present sequence represents human secreted protein (see descriptor line
for gene number and clone identification) Human; secreted protein; immunomodulatory; antisclerotic; anti-HIV; dermatological; immunosuppressive; antiinflammatory; immunostimulant; cytostatic; cardiant; vascular; anti-anglogenic; ophthalmological; neuroprotective; nootropic; anticonvulsant; antialzheimers; vulnerary; antiparkinsonian; antimicrobial; gene therapy; vaccine; immune disorder; antitparkinsonian; attimicrobial; gene therapy; vaccine; immune disorder; human immunodeficiency virus; hyperproliferative disorder; wound healing; Gaucher's disease; cardiovascular disease; Scimitar syndrome; chemotaxis; corneal graft neovascularisation; diabetic retinopathy; regeneration; neurological disorder; Huntington's chorea; Alzheimer's disease; parkinson's disease; alzheimer's disease; 1 MAPRALPGSAVLAAAVFVGGAVSSPLVAPDNGSSRTLHSRTETTPSPSNDTGNGHPEYIA 60 1 MAPRALPGSAVLAAAVFVGGAVSSPLVAPDNGSSRTLHSRTETTPSPSNDTGNGHPEYIA 60 1; 33.5%; Score 477.5; DB 2; Length 103; 95.0%; Pred. proteins (I) and polynucleotide (II) sequences. (I) and (II) have various activities based on the tissues and cells the genes are expressed in.

Carivities based on the tissues and cells the genes are expressed in.

Carmaple of these activities include: immunomodulatory; antisclerotic; dermatological; immunosuppressive; antiinflammatory; immunostimulant; antiparkinsonian; antimicrobial; antianflammatory; immunostimulant; antiparkinsonian; antimicrobial; and vulnerary. (I) and (II) can be used in gene therapy and vaccine production. (I) and (II) can be used in the prevention, diagnosis and treatment of immune disorders (e.g. multiple sclerosis, systemic lupus erythematosus and human immunodeficiency virus (HIV) infections), hyperproliferative disorders (e.g. cancers and caucher's disease), cardiovascular diseases (e.g. cancers and caucher's disease), ardiovascular diseases (e.g. cancers and disorders (e.g. corneal graft neovascularisation and diabetic retinopathy), neurological disorders (e.g. Huntington's chorea, Alzheimer's diseases and Parkinson's diseases (e.g. huntington's chemotaxis. ABA83185 to ABA81193 and ABBS03100 represent sequences used in the exemplification of
                                                                                                         ds encoding 207 human secreted polypeptides, useful for diagnosing and/or treating, e.g. cancers, Parkinson's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; gene therapy; autoimmune disorder; multiple sclerosis; cancer; systemic lupus erythematosus; haematopoietic cell disorder; allergy; agammaglobulinaemia; ataxia telanglectasia; blood coagulation disorder; affibrinogenaemia; thrombocytopenia; graft-versus-host disease; arthritis; affibrinogenaemia; thrombocytopenia; graft-versus-host disease; arthritis; inflammatory condition; ischemia-reperfusion injury; infectious disease; hyperproliferative disorder; purpura; viral infection; regeneration; bacterial infection; ulcer; Alzheimer's disease.

The invention relates to an isolated protein comprising amino acid residues 33-205 or 1-205 of a a novel human secreted protein appearing as ABO2525. The protein is encoded by one of 238 disclosed CDNA sequences encoding 238 secreted proteins. ABD26252 is a precerebellin-like protein. Also included are a composition comprising the protein and a carrier and an isolated protein produced by expressing the protein cited above by a cell, and recovering the protein. The protein for diagnosing or treating neurodegenerative and behavioural disorders (e.g. Alzheimer's disease, Parkinson's disease, Huntington's disease, schizophrenia, mania, chemitia, paranola, psychoses or autism), immune disorders (e.g. Alzheimer's infection, inflammation, allergy), liver disorders (e.g. ADDS, leukaemia, rheumatoid arthritis, sepsis, acne, psoriasis) and cancer. The present requence is one of the 238 disclosed novel secreted proteins. Note: The sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data secreted broteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 MAPRALPGSAVLAAAVFVGGAVSSPLVAPDNGSSRTLHSRTETTPSPSNDTGNGHPEYIA 60

proteins (I) and polynucleotide (II) sequences. (I) and (II) have various activities based on the tissues and cells the genes are expressed in.

Example of these activities include: immunomodulatory; antisclerotic; dermatological; immunosuppressive; antiinflammatory; immunostimulant; anti-HV; cytostatic; cardiant; anti-angiogenic; optibalmological; cardiant; anti-angiogenic; optibalmological; neuroprotective; noctropic; anticonvulsant; antialzheimers; vascular; antiparkinsonian; antimicrobial; and vulnerary. (I) and (II) can be used in the prevention, diagnosis and treatment of immune disorders (e.g. multiple prevention, diagnosis and treatment of immune disorders (e.g. multiple sclerosis, systemic lupus erythematous and human immunodeficiency virus (HIV) infections), hyperproliferative disorders (e.g. cancers and canchers disease), cardiowascular diseases (e.g. Scinntar syndrome, Chaga's cardiomyopathy and coronary arteriosclerosis), angiogenic disorders (e.g. conceal graft neovascularisation and disbetic cationpathy), neurological disorders (e.g. Humtington's chonces, Alzheimer's disease and Parkinson's diseases), cardiomyopathy and coronary arteriosclerosis), angiogenic cetinopathy, neurological disorders (e.g. Humtington's chorces, Alzheimer's disease and Parkinson's diseases), cardiomyopathy, regeneration and/or chemotaxis. ABA83185 to the promoting wound healing, regeneration and/or chemotaxis. ABA83185 to the armonial dispense used in the exemplification of
antiparkinsonian; antimicrobial; gene therapy; vaccine; immune disorder; multiple sclerosis; systemic lupus erythematosus; HIV infection; cancer; human immunodeficiency virus; hyperproliferative disorder; wound healing; Gaucher's disease; cardiovascular disease; Scimitar syndrome; chemotaxis; Chaga's cardiomyopathy; coronary arteriosclerosis; angiogenic disorder; corneal graft neovascularisation; diabetic retinopathy; regeneration; neurological disorder; Huntington's chorea; Alzheimer's disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      receptors, TR21 and TR22 and polyhucleotides encoding them. Sequences of the invention are useful in the diagnosis, treatment and prevention of sancers (e.g., cancers of the adrenal gland, bone, urogenital or bone marrow, in particular breast and ovarian cancer), immune disorders (e.g., autoimmune haemolytic anaemia, rheumatoid arthritis, allergies, Addison's disease, ulcerative colitis), cardiovascular disorders (e.g., myocardial ischaemias), wound healing, neurological diseases (e.g., cerebral anoxia, epilopsy) and infections diseases such as viral, bacterial, fungal and parasitic infections. They are also useful in gene therapy. The present sequence is human TR21 protein fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to novel human tumour necrosis factor (TNF)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Two novel proteins, TR21 and TR22, which are members of the tumor necrosis factor receptor, useful for the diagnosis and treatment of immune disorders, cancer, cardiovascular disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                23.3%; Score 332; DB 5; Length 181; 85.5%; Pred. New isolated protein, useful for preparing a composition for diagnosing or treating cancer, inflammatory, immune or infectious diseases.

Disclosure; Page 28; 172pp; English.

useful for preparing a composition for diagnosing or treating autoimmune disorders e.g. multiple solerous and systemic lupus erythematosus; thaematopoietic cell disorders e.g. agammaglobulinaemia and ataxia telangieccasia; blood coagulation disorders e.g. afibrinogenaemia and thrombocycopenia; allergy; graft-versus-host disease; inflammatory conditions e.g. ischaemia-reperfusion injury and arthritis; orginal infection and bacterial infection. The polymuclectide or protein can be used to regenerate damaged tissue e.g. ulcers and Alzhaimer's disease. The present sequence represents the amino acid sequence of a novel human secreted protein fragment. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at The invention relates to an isolated HEWAE80 protein. The protein is

Sequence 181 AA;

New precerebellin-like protein, useful for diagnosing or treating neurodegenerative and behavioral disorders, immune disorders, liver disorders, and cancer.

Disclosure, Col 52; 156pp; English.

The invention relates to an isolated protein comprising amino acid residues 33-205 or 1-205 of a novel human secreted protein appearing as ABO26252. The protein is encoded by one of 238 disclosed cDNA sequences encoding 238 secreted proteins. ABO26252 is a precerebellin-like protein. Also included are a composition comprising the protein and a carrier and a isolated protein produced by expressing the protein and a carrier and cell, and recovering the protein. The proteins are useful for disgnosing or treating neurodegenerative and behavioural disorders (e.g. Alzhelmer's disease, Parkinson's disease, Huntington's disease, schizophrenia, mania, dementia, paranola, psychoses or autism), immune disorders (e.g. Alzhelmer's infection, inflammation, allergy), ilver disorders (e.g. hepatoblastoma, rheumatoid arthritis, sepsis, acne, psoriasis) and cancer. The present sequence is a protein associated with one of the 238 disclosed novel

The composition and methods are useful for diagnosing, preventing and treating diseases such as proliferative (e.g. cancer), inflammatory, immune, metabolic, genetic, bacterial and viral diseases. The present sequence represents a human secreted protein. The present sequence is available on WIPOWEB and is not in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       162 GGGGSGTED------ANEDTIGVLVRLITEKKENAAALEELLKE---YHSKQL

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

Patent No. 6914047

GENERAL INFORMATION:

APPLICANT: VOUNG et al.

TITLE OF INVENTION: 207 Human Secreted Proteins

TITLE OF INVENTION: 207 Human Secreted Proteins

TITLE PEPLICATION NUMBER: US/10/004,860

CURRENT FILING DATE: 2001-12-07

Prior Application removed - See File Wrapper or Palm

NUMBER OF SEQ ID NOS: 1227

SOFTWARE: Patentin Ver. 2.0
